I'm sorry, I don't know if I ever responded to you...

We are preparing a presentation on the FFS modeling results – I've given guidance that it should be about 20 min long and that it should start with a reminder of the modeling framework to give some context for the results themselves – is that OK?

**Subject:** Prep for January 9 Passaic CAG meeting

Hi all,

We had a small but productive CAG meeting last week. The CAG is putting together a set of recommendations/input regarding outreach for the proposed plan as well as scoping its overall range of expected input to the ROD. The CAG will not be responding directly to the CPG with regard to its proposal, rather it will provide specific input on the hotspot alternative in the FFS, and point to its similarity to the CPG approach.

For January, we have confirmed that Lisa will present the natural resource restoration opportunities. The other topics we are wondering about include:

- update on the EPA modeling results (is this ready?)
- results of sampling for additional hotspots similar to 10.9 (is this ready?)
- Lessons learned from River mile 10.9 regarding barge transfer (is this something we can get?)

let us know if there is anything else we should be considering for the January meeting

thanks

Doug
